

DRINKING WATER WARNING

BOIL YOUR WATER BEFORE USING

**HIERVAN EL AGUA ANTES DE USARLA.
 ESTE INFORME CONTIENE INFORMACION MUY IMPORTANTE SOBRE SU AGUA DE BEBER.
 TRADUZCALO O HABLE CON ALGUIEN QUE LO ENTIENDA BIEN.**

Drinking water May Be At Increased Risk From Microbial Contamination.

We routinely monitor the conditions in the distribution system. On March 23, 2026, we experienced a loss of positive water pressure due to several water transmission main breaks affecting the operation of the water treatment plant. A loss of positive water pressure is a signal of the existence of conditions that could allow contamination to enter the distribution system through back-flow by back-pressure or back-siphonage. As a result, there is an increased chance that the water may contain disease-causing organisms.

What should I do?

DO NOT DRINK THE WATER WITHOUT BOILING IT FIRST. Bring all water to a rolling boil, let it boil for one minute, and let it cool before using; or use bottled water. You should use boiled or bottled water for drinking, making ice, washing dishes, brushing teeth, and food preparation until further notice.

Inadequately treated water may contain disease-causing organisms. These organisms include bacteria, viruses, and parasites, which can cause symptoms such as nausea, cramps, diarrhea, and associated headaches.

These symptoms, however, are not caused only by organisms in drinking water, but also by other factors. If you experience any of these symptoms and they persist, you may want to seek medical advice.

Guardians of infants and young children and people at increased risk, such as pregnant women, some of the elderly, and people with severely compromised immune systems, should seek advice from their health care advisors about drinking this water. General guidelines on ways to lessen the risk of infection by microbes are available from EPA's Safe Drinking Water Hotline at 1 (800) 426-4791.

What happened? What is being done?

On Sunday March 22, 2026 at approximately 6:00 PM, a first of several water transmission main breaks occurred that prevented the water treatment plant to deliver water to the distribution system. This caused water storage tanks to drop to levels low enough for some customers to lose positive pressure over the next day. All breaks were repaired and water treatment plant was placed into serve approximately 2:00 AM on Tuesday, March 24, 2026. Customers should have normal water service later today. We will inform all customers when all corrective actions have been completed and when you no longer need to boil your water.

We will inform you when all corrective actions have been completed and when you no longer need to boil your water.
